

ShieldiT Use Case: Financial Services, Banking & Capital Markets

Industry Challenges

In today's **high-stakes financial markets**, cybercriminals are increasingly targeting **executives, traders, wealth managers, and client advisors** through compromised devices, unregulated messaging apps, SIM swaps, and advanced phishing across SMS, Telegram, and WhatsApp. These attacks expose sensitive financial transactions, client portfolios, and insider communications to unprecedented risk.

At the same time, financial institutions must meet **strict regulatory mandates** — including **GLBA, SOX, PCI DSS, FINRA, and SEC 17a-4** — which demand data confidentiality, retention, and auditable communications across all channels.

Yet most institutions still lack a secure, compliant, and purpose-built mobile communications platform with the control, visibility, and enforcement mechanisms required for financial-grade operations. Conventional tools — from MDM-only controls to consumer apps like WhatsApp and Signal, or email — are insufficient to protect confidential financial workflows and fail regulatory audit requirements when used across organizational or client boundaries.

How ShieldiT Delivers

ShieldiT provides a **unified, compliance-grade mobile security and secure communications platform** purpose-built for the financial ecosystem — including **banks, investment firms, venture capital groups, hedge funds, trading desks, wealth managers, and compliance teams.**

The platform combines:

Encrypted voice, video, and messaging with enterprise-grade policy enforcement and end-to-end auditability.

Advanced Mobile Threat Defense (MTD) with on-device AI to detect SIM swaps, rogue apps, man-in-the-middle attacks, and device compromises in real time.

Federated collaboration with fine-grained controls, allowing institutions to define exactly who can initiate or receive communication across teams, domains, and external partners.

Integrated compliance logging and exports to Microsoft Purview, Smarsh, Global Relay, or customer archives, ensuring full alignment with **SEC 17a-4, FINRA, GLBA, PCI DSS, and SOX** requirements.

Identity and access integration with Azure AD/Entra, Okta, Ping, and SAML/OIDC for **zero trust enforcement**, conditional access, and automated provisioning/deprovisioning.

Delivered as a **single, enterprise-grade solution**, ShieldiT eliminates reliance on fragmented tools (consumer apps, email, standalone MDMs) and provides **deep identity integration, zero-trust enforcement, and real-time compliance assurance** for high-value financial operations.

Key Capabilities for Financial Institutions

Federated Secure Collaboration

- End-to-end encrypted communications across **internal teams, external investors, fund administrators, banks, and clients.**
- **Federation controls** that define who may initiate or receive communication across domains, firms, or business units.
- **Role-based visibility and governance** to enforce confidentiality policies (e.g., trader ↔ compliance only).
- Secure virtual **"deal rooms" and compliance-controlled channels** for M&A, IPO, and high-value trading activities.

Advanced Mobile Threat Defense (MTD)

- Real-time detection and prevention of:
 - Rogue or unauthorized financial applications
 - SIM swaps, credential theft, and man-in-the-middle attacks
 - Jailbroken/rooted devices and motion-based anomalies indicating compromise
- **On-device telemetry and AI-based risk scoring**, enabling auto-quarantine without cloud dependency.
- **Native integration with Microsoft Intune and leading MDMs** for posture-based conditional access.

Data Protection & DLP Enforcement

- **Prevention of copy/paste, screenshots, and file sharing** across untrusted applications or channels.
- **Geo-fencing and hygiene-based conditional access**, ensuring sensitive workflows (e.g., trading desks, client communications) are protected.

- **Workspace isolation** between personal and enterprise apps for BYOD, preventing data leakage.
- Alignment with **PCI DSS, SOX, and GLBA** requirements for data confidentiality.

Compliance-Grade Logging & Export

- **AuditBot** for real-time privileged action monitoring and administrator activity tracking.
- Communication logging with **immutable export** to Microsoft Purview, Smarsh, Global Relay, or customer systems.
- Support for **SEC 17a-4, FINRA retention mandates, GLBA, and internal supervisory review policies**.
- **eDiscovery and litigation hold workflows** supported by secure, auditable exports.

Identity & Federation Integration

- Full support for **Azure AD/Entra, Okta, Ping, SCIM, SAML/OIDC** identity frameworks.
- **RBAC tailored to financial roles** (trader, advisor, wealth manager, CFO, compliance officer).
- Group-based access policies for **deal-specific or regulatory-sensitive communications**.
- **Automated provisioning and deprovisioning** via directory synchronization, ensuring access is always aligned with employment status.

Impact Across the Financial Ecosystem

01

Confidential Collaboration with Federation Controls

Secure, auditable communication across banks, investment firms, fund administrators, clients, and regulators — governed by **fine-grained federation policies**.

02

Fraud and Compromise Reduction

Significant reduction in **fraud, interception, SIM swap abuse, and mobile compromise risks** during trading, deal execution, and client advisory workflows.

03

Audit Efficiency & Regulatory Alignment

Streamlined compliance audits through **immutable logging, automated exports, and real-time reporting** aligned with **SEC 17a-4, FINRA, GLBA, PCI DSS, and SOX** requirements.

04

Replacement of Risky Consumer Apps

Eliminates the use of **WhatsApp, Signal, Telegram, and email** for sensitive communications — consolidating security, compliance, and governance into a **single unified platform**.

05

Secure, Compliant Mobility Across the Enterprise

Enables **front office, middle office, and executive leadership** to operate with full mobility while preserving **auditability, security, and regulatory trust**.

06

Operational Efficiency & Risk Governance

Consolidates fragmented tools into one enterprise-grade platform, reducing **operational overhead** while strengthening **governance and supervisory control**.

Conclusion

In the fast-moving and highly regulated world of **banking, capital markets, and financial services**, the ability to **communicate and collaborate securely** is essential to protecting client trust, safeguarding high-value transactions, and meeting stringent regulatory obligations.

ShieldiT delivers a **unified, compliance-grade platform** that combines secure communications, advanced mobile threat defense, data protection, and governance into a single solution built for the financial industry. By eliminating reliance on unsecure consumer tools and fragmented security controls, ShieldiT enables institutions to:

- **Reduce fraud and insider risks** through continuous device posture enforcement and on-device AI detection.
- **Accelerate audit readiness** with integrated compliance logging, AuditBot oversight, and seamless export to regulatory archives.
- **Protect client communications and sensitive transactions** with end-to-end encryption and federation controls.
- **Empower mobility** across trading desks, advisory teams, and executive leadership — without compromising compliance or security.

Whether deployed in **cloud, sovereign, or on-premises environments**, ShieldiT adapts to the operational and regulatory needs of modern financial institutions, helping them stay **secure, compliant, and trusted in every interaction**.
