

ShieldiT Protect

Advanced Mobile Threat Defense for Enterprise
and Public Sector Organizations

Executive Summary

Mobile devices have become a primary target for cyberattacks, exposing organizations to increasing risks from phishing, malicious applications, rogue networks, and device-level exploits. **ShieldiT Protect by ASPIS Cyber** delivers enterprise-grade, on-device Mobile Threat Defense (MTD) designed to secure both corporate and BYOD mobile devices without disrupting the user experience.

Built for simplicity, scalability, and compliance, ShieldiT Protect enables rapid deployment of AI-powered, real-time mobile threat protection across diverse device environments. The platform helps organizations meet security and regulatory requirements, including **ISO 27001** and **SOC 2 Type II**, while maintaining productivity and safeguarding user privacy.

Key Use Cases

BYOD Security Enforcement

Apply consistent mobile threat defense to employee-owned devices accessing corporate resources.

Corporate Device Protection

Ensure enterprise-issued devices are continuously protected against evolving mobile attack vectors.

Phishing Prevention

Detect and block phishing attempts delivered via SMS, email, QR codes, and malicious URLs.

Network and Device Security

Identify and prevent rogue Wi-Fi connections, man-in-the-middle attacks, and device compromise in real time.

Compliance Enablement

Support adherence to security and regulatory frameworks such as ISO 27001 and SOC 2 Type II through enforced mobile security policies.

Remote Workforce Safeguards

Extend full mobile threat defense to remote and hybrid employees, ensuring secure access from any location.

Core Features

On-Device Threat Detection

AI-driven analysis of device behavior, applications, networks, and phishing indicators, processed entirely on the device for maximum speed and privacy.

Phishing and Social Engineering Protection

Detection and blocking of malicious links delivered via SMS, email, mobile apps, and QR codes.

Malicious App Detection

Identification of high-risk, malicious, or non-compliant applications through on-device heuristics and behavioral analysis.

Network Threat Detection

Protection against rogue access points, spoofed networks, insecure connections, and man-in-the-middle attacks.

Core Features

Device Risk Posture Monitoring

Continuous assessment of device security settings, OS integrity, and compliance with corporate configuration standards.

ManageiT Integration

Centralized policy enforcement, incident response workflows, and visibility through the ManageiT administration console.

SIEM and Compliance Integration

Native telemetry and incident forwarding to SIEM/XDR platforms such as Microsoft Sentinel, Splunk, and QRadar.

MDM/EMM Compatibility

Seamless coexistence and policy synchronization with Microsoft Intune, VMware Workspace ONE, MobileIron, and other leading device management platforms.

Differentiators

Device-First Protection

Real-time, on-device detection without reliance on constant cloud connectivity, ensuring resilience in any environment.

AI-Powered Threat Intelligence

Behavioral and anomaly detection engines that adapt to evolving mobile threat landscapes and zero-day exploits.

Seamless Enterprise Deployment

Lightweight application deployable via leading MDM/EMM platforms with minimal end-user interaction.

Centralized Administration

ManageiT console provides organization-wide visibility, incident tracking, and policy enforcement from a single interface.

Compliance Alignment

Supports ISO 27001, SOC 2 Type II, and other industry compliance frameworks through enforced mobile security policies.

Continuous Device Integrity Monitoring

Ensures OS integrity, security configuration compliance, and proactive detection of device compromise.

Scalable for Large Deployments

Optimized for organizations managing thousands of devices across distributed teams and geographies.

Rapid Threat Response

Enables immediate policy enforcement and threat remediation directly from the management console.

Architecture Overview

ShieldiT Protect is a cloud-managed, on-device Mobile Threat Defense solution built on a lightweight agent optimized for performance and minimal resource consumption. The platform integrates seamlessly with enterprise identity and security ecosystems while processing detection logic directly on the device for maximum speed and independence from constant connectivity.

Centralized administration is delivered through the **ManageiT console**, providing policy enforcement, incident response, and real-time visibility. API-based integration enables alignment with existing SIEM, XDR, and security operations workflows, ensuring ShieldiT Protect fits naturally into established enterprise security architectures.

Licensing and Delivery Model

SaaS Licensing

Per-device, annual subscription model with scalable licensing to accommodate organizational growth.

Optional Add-Ons

ShieldiT Black hardened devices, extended reporting packages, and advanced SIEM integration capabilities.

Enterprise-Scale Deployments

Optimized for organizations managing thousands of devices across diverse geographies.

Flexible Implementation Models

Supports centralized IT, decentralized IT, and hybrid administration structures.

Implementation and Training Services

Guided deployment with technical training to ensure rapid adoption and operational readiness.

Service Level Commitments

SLA-backed uptime, performance, and support response times to meet enterprise operational requirements.

Conclusion

ShieldiT Protect enables organizations to proactively defend mobile endpoints against today's most sophisticated cyber threats. With real-time, on-device detection, advanced phishing prevention, and seamless integration into enterprise security operations, ShieldiT Protect strengthens organizational security posture while maintaining productivity and user experience.
