

ASPIS
CYBER SECURITY

ShieldiT Use Case: SLED & Federal Government

Industry Challenges

State, local, education, and federal government agencies operate in some of the **most targeted and high-stakes environments** in the world. Cybersecurity is not only an IT requirement — it is a matter of national security, public trust, and mission readiness.

Agencies face escalating risks:

Targeted nation-state and ransomware campaigns aimed at disrupting operations, compromising sensitive data, and destabilizing public infrastructure.

Mobile espionage and surveillance attempts, including SIM swaps, rogue base stations, and zero-click exploits designed to bypass traditional defenses.

Insider threats and unauthorized data exfiltration from unmanaged or compromised devices, often occurring in sensitive or classified environments.

Strict regulatory and compliance mandates, including **FISMA, FedRAMP, CJIS, CMMC, and NIST 800-53**, requiring data confidentiality, integrity, authenticity, and traceability.

Operational complexity in environments that rely on **air-gapped networks, classified facilities, and legacy systems**, making secure mobile communications and endpoint protection difficult to implement at scale.

In these mission-driven environments, even a single compromise can have **national security implications**, disrupt **continuity of government services**, and erode **public trust**.

How ShieldiT Defense Delivers

ShieldiT Defense provides government and public sector agencies with a **mission-grade, fully isolated platform** for secure communications and mobile threat defense. It enables **end-to-end encrypted messaging, voice, and video**, while continuously enforcing **device posture, threat defense, and policy controls** across sensitive and classified environments.

The platform supports deployment in **on-premises, private cloud, sovereign cloud, or AWS GovCloud infrastructures**, with the flexibility to operate in **air-gapped, disconnected, or tactical networks**. Each deployment is tailored to meet **agency-specific operational and security requirements**, with **compliance alignment** to frameworks such as **FISMA, FedRAMP, CJIS, NIST 800-53, and CMMC**.

By unifying **secure communications, advanced mobile threat defense, and governance controls** in a single solution, ShieldiT enables agencies to **protect sensitive data, maintain mission readiness, and ensure operational continuity** even in the most demanding security environments.

Core Capabilities for Government Agencies

Mission-Grade Secure Communications

- End-to-end encrypted **voice, video, and messaging** designed for government and defense environments.
- **Federation controls** to manage communications across departments, agencies, contractors, and partners.
- Complete isolation from **public messaging platforms** (e.g., WhatsApp, SMS, Signal).

Advanced Mobile Threat Defense

- Continuous protection against **mobile malware, spyware, and zero-click exploits** targeting government personnel.
- Defense against **SIM swaps, rogue access points, and device tampering**.
- Enforced **device health checks and posture verification** before granting access to sensitive systems.

Role-Based Access for Federated Users

- Granular **RBAC mapped by agency, department, clearance level, and mission role**.
- Secure provisioning and rapid deactivation across multiple government domains.
- Interoperability with **Azure Government AD, CAC/PIV authentication, and other approved identity providers**.

Custom Deployment Architecture

- Flexible deployment in **on-premises, air-gapped, private cloud, or GovCloud environments**.
- Operates with or without MDM/EMM integration (supports Intune, MobileIron, etc.).
- Full compatibility with **classified networks, tactical communications, and optional hardened Android devices**.

Compliance & Audit Alignment

- **AuditBot-enabled logging and privileged action monitoring, aligned with FedRAMP, FISMA, CJIS, NIST 800-53, and CMMC frameworks.**
- Secure, auditable export options to **government compliance databases, SIEM, and XDR platforms.**
- Multi-tenant **governance controls to separate users by region, department, or clearance level.**

Resilient in Tactical & Disconnected Environments

- Operates effectively in low-bandwidth, disconnected, or air-gapped conditions, ensuring mission continuity during field operations or classified exercises.

Immutable Logging & Oversight

- Provides tamper-resistant, immutable audit logs for investigations, evidentiary use, and mission after-action reviews.

Secure Contractor & Partner Access

- Extends secure communication and endpoint protection to third-party contractors and supply chain partners, under strict federation and RBAC controls.

Impact for SLED and Federal Government

Zero-Trust, Mobile-Secure Operations

Establishes a **zero-trust security framework** across classified and unclassified communications, ensuring only compliant, trusted devices gain access.

Reduced Attack Surface

Eliminates reliance on **insecure consumer mobile apps** and significantly reduces the mobile threat surface through continuous posture enforcement and advanced threat defense.

Operational Continuity & Resilience

Ensures **mission continuity** even in disconnected, low-bandwidth, or tactical environments, reducing risk of disruption to critical services and national security operations.

Secure Multi-Agency Collaboration

Enables **controlled and auditable communication** between agencies, departments, contractors, and vetted external partners without reliance on public platforms.

Audit-Readiness & Compliance Alignment

Supports **audit-readiness and compliance alignment** with U.S. federal and state standards, including **FedRAMP, FISMA, CJIS, CMMC, and NIST 800-53**.

Unified Mission-Grade Platform

Consolidates **voice, video, chat, mobile threat defense, and governance controls** into a single, hardened solution that improves operational efficiency.

Conclusion

In today's evolving threat landscape, government agencies at every level — state, local, education, and federal — cannot afford gaps in **mobile security or secure communications**. Sensitive data, mission-critical operations, and public trust all depend on the ability to protect personnel and systems from sophisticated nation-state, criminal, and insider threats.

ShieldiT Defense delivers a **mission-ready platform** engineered for these realities. By combining **secure communications, advanced mobile threat defense, and governance controls** into a single solution, ShieldiT provides agencies with:

- **Confidential, role-based communication** across departments, agencies, and vetted external partners.
- **Continuous device posture enforcement** and AI-driven detection to reduce the mobile attack surface.
- **Deployment flexibility** — from on-premises and sovereign cloud to **air-gapped and tactical environments**.
- **Compliance alignment** with frameworks such as **FedRAMP, FISMA, CJIS, NIST 800-53, and CMMC**, ensuring readiness for audits and oversight.

By adopting ShieldiT, government organizations can strengthen **mission continuity**, safeguard sensitive data, and uphold **operational resilience** in even the most demanding security environments.
