

ShieldiT Enterprise

Comprehensive Secure Communications and
Mobile Threat Defense for Modern Enterprises

Executive Summary

Enterprises today face growing cybersecurity risks targeting mobile devices, corporate communications, and employee endpoints. **ShieldiT Enterprise by ASPIS Cyber** delivers a unified, enterprise-grade solution that combines advanced end-to-end encrypted communications with real-time mobile threat defense (MTD).

Designed to protect sensitive business data, maintain regulatory compliance, and reduce risk across distributed and mobile-first workforces, ShieldiT Enterprise provides consistent protection regardless of where employees work or what devices they use.

Built for scalability and operational efficiency, the platform integrates seamlessly with corporate security ecosystems, enabling organizations to secure communications and endpoints without disrupting productivity or user experience.

Key Use Cases

Secure Executive Communications

Protect sensitive leadership and board-level communications with encrypted voice, video, chat, and file sharing.

Phishing and Threat Prevention

Detect and block phishing, malware, network spoofing, and device compromise attempts in real time.

BYOD and COPE Security

Enable secure use of personal (BYOD) and corporate-owned (COPE) devices without sacrificing productivity.

Hybrid Workforce Security

Safeguard mobile endpoints for remote, on-site, and hybrid teams through persistent device-level threat defense.

Regulatory Compliance Support

Enforce policies aligned with ISO 27001, SOC 2 Type II, and industry-specific compliance frameworks.

Global Workforce Enablement

Provide consistent security controls and encrypted communications to employees across all regions and time zones.

Core Features

Advanced Encrypted Communications

End-to-end encryption for chat, voice, video, and media sharing using AES-256 with Olm/Megolm protocols and Double Ratchet algorithms. Forward and backward secrecy ensures data privacy even in the event of key compromise.

Real-Time Mobile Threat Defense

AI-powered on-device protection against phishing, including SMS, email, QR codes, and URLs, as well as malicious applications, network spoofing, and device-level compromise.

ManageiT Admin Console

Centralized administration of communications, device security, and compliance policies through a secure, intuitive dashboard.

AuditBot Compliance Logging

Continuous auditing of device events, user activity, and policy enforcement to support both internal governance and external regulatory audits.

Core Features

Enterprise Identity Integration

Native support for Azure AD, Okta, Google Workspace, and SAML/OIDC providers for seamless single sign-on and role-based access control.

Endpoint and Compliance Integration

Compatible with Microsoft Intune MDM, major SIEM/XDR platforms including Microsoft Sentinel, Splunk, and QRadar, as well as compliance platforms such as Purview and Smarsh.

Multi-Platform Coverage

Secure mobile applications for iOS and Android, secure web access for Windows, macOS, and Linux, with native desktop applications in active development.

Flexible Deployment Models

Available as SaaS with multi-tenant architecture, with optional private cloud or dedicated infrastructure for high-security environments.

Differentiators

Unified Platform

Combines secure communications and mobile threat defense in a single enterprise-ready solution.

Enterprise-Grade Encryption

Implements AES-256, HMAC-SHA-256, Olm/Megolm protocols, and Double Ratchet algorithms to deliver strong, scalable cryptographic security.

User-Controlled Encryption Keys

Operates on a zero-knowledge architecture with customer-controlled certificates for maximum data privacy.

Comprehensive Threat Coverage

Defends against device, application, network, and phishing threats using on-device AI intelligence.

Seamless Enterprise Integration

Works with major corporate IT and security tools to minimize deployment complexity and speed adoption.

Flexible Deployment Options

Supports multi-tenant SaaS, private cloud, and dedicated infrastructure for high-security use cases.

Licensing and Delivery Model

SaaS Licensing

Per-user, annual subscription model with scalable licensing to accommodate growth.

Enterprise Flexibility

Supports centralized or decentralized IT models, ensuring alignment with diverse enterprise structures.

Streamlined Onboarding and Deployment

Guided implementation process with dedicated technical resources to ensure rapid adoption.

Add-On Options

PSTN voice services, ShieldiT Black hardened devices, and private cloud or dedicated infrastructure deployments.

High-Security Deployment Options

Available for air-gapped, on-premise, or government cloud environments.

Service Level Commitments

SLA-backed performance, uptime, and response time guarantees to meet enterprise operational requirements.

Conclusion

ShieldiT Enterprise delivers a scalable, secure, and compliance-ready solution to modern enterprise mobile security and communications challenges. By unifying advanced encrypted communications with real-time mobile threat defense, **ASPIS Cyber** enables organizations to reduce risk, strengthen resilience, and protect sensitive information across distributed and mobile-first workforces.

To learn more or to arrange a consultation, visit www.aspiscyber.com or contact sales@aspiscyber.com.

Differentiators

Compliance-Ready Architecture

Designed to support ISO 27001, SOC 2 Type II, and other industry-specific compliance frameworks with built-in audit and security controls.

Proven Performance in High-Security Environments

Enables immediate policy enforcement and threat remediation directly from the management console.

Architecture Overview

ShieldiT Enterprise is built on a **cloud-native, microservices-based architecture** orchestrated with **Kubernetes**, delivering elastic scalability, high availability, and strict tenant isolation. The platform is designed for seamless integration into existing enterprise IT and security ecosystems, enabling rapid deployment with minimal operational overhead.

Its modular design supports continuous updates, high resilience, and secure scaling across global environments, ensuring consistent performance and security for both cloud-based and private infrastructure deployments.
